Experiment 5.1

Student Name: Prince Ranjan UID: 22BCS12733

Branch: CSE Section/Group:22BCS_IOT-640/A
Semester: 6th Date of Performance:24/02/25
Subject Name: PBLJ Subject Code: 22CSH-359

1. Aim: Write a Java program to calculate the sum of a list of integers using autoboxing and unboxing.

2. Objective: Write a Java program to calculate the sum of a list of integers using autoboxing and unboxing. Include methods to parse strings into their respective wrapper classes (e.g., Integer.parseInt())

3. Implementation/Code:

```
import java.util.ArrayList;
import java.util.List;
public class SumOfIntegers {
  public static void main(String[] args) {
    // Example list of integers as strings
    List<String> integerStrings = new ArrayList<>();
    integerStrings.add("10");
    integerStrings.add("20");
    integerStrings.add("30");
    // Calculate sum of integers in the list
    int sum = calculateSum(integerStrings);
     System.out.println("Sum of integers: " + sum);
  }
  public static int calculateSum(List<String> integerStrings) {
     int sum = 0;
    for (String str : integerStrings) {
       // Parse each string to Integer using Integer.parseInt()
       Integer num = Integer.parseInt(str); // Autoboxing
       sum += num; // Unboxing
     }
```

```
return sum;
```

4. Output:

```
Output

Sum of integers: 60

=== Code Execution Successful ===
```

Experiment 5.2

1. **Aim :** Create a Java program to serialize and deserialize a Student object.

2. Objective:

Create a Java program to serialize and deserialize a Student object. The program should:

Serialize a Student object (containing id, name, and GPA) and save it to a file.

Deserialize the object from the file and display the student details.

Handle FileNotFoundException, IOException, and ClassNotFoundException using exception handling.

3. Implementation /Code:

```
import java.io.*;
class Student implements Serializable {
   private static final long serialVersionUID = 1L;
   private int id;
```

```
private String name;
  private double gpa;
  public Student(int id, String name, double gpa) {
     this.id = id;
    this.name = name;
     this.gpa = gpa;
  @Override
  public String toString() {
    return "Student{" + "id=" + id + ", name="" + name + '\" + ", gpa=" + gpa +
'}';
public class StudentSerialization {
  private static final String FILE_NAME = "student.ser";
  public static void serializeStudent(Student student) {
    try (ObjectOutputStream oos = new ObjectOutputStream(new
FileOutputStream(FILE_NAME))) {
       oos.writeObject(student);
       System.out.println("Student object serialized successfully.");
     } catch (IOException e) {
       e.printStackTrace();
  }
  public static void deserializeStudent() {
     try (ObjectInputStream ois = new ObjectInputStream(new
FileInputStream(FILE_NAME))) {
       Student student = (Student) ois.readObject();
       System.out.println("Deserialized Student: " + student);
     } catch (FileNotFoundException e) {
       System.err.println("Error: File not found!");
     } catch (IOException e) {
       System.err.println("Error: IO Exception occurred!");
     } catch (ClassNotFoundException e) {
       System.err.println("Error: Class not found!");
  }
```

```
public static void main(String[] args) {
    Student student = new Student(101, "John Doe", 3.8);
    serializeStudent(student);
    deserializeStudent();
}
```

4. Output:

```
Student object serialized successfully.

Deserialized Student: Student{id=101, name='John Doe', gpa=3.8}

...Program finished with exit code 0

Press ENTER to exit console.
```

Experiment 5.3

1. **Aim**: Create a menu-based Java application

2. Objective:

Create a menu-based Java application with the following options.

- 1.Add an Employee
- 2. Display All
- 3. Exit If option 1 is selected, the application should gather details of the employee like employee name, employee id, designation and salary and store it in a file. If option 2 is selected, the application should display all the employee details. If option 3 is selected the application should exit.

3. Implementation /Code:

```
import java.io.*;
import java.util.*;
class Employee implements Serializable {
```

```
private static final long serialVersionUID = 1L;
  private int id;
  private String name;
  private String designation;
  private double salary;
  public Employee(int id, String name, String designation, double salary) {
    this.id = id;
    this.name = name;
    this.designation = designation;
    this.salary = salary;
  }
  @Override
  public String toString() {
    return "Employee{" + "id=" + id + ", name="" + name + '\" + ", designation=""
+ designation + '\" + ", salary=" + salary + '}';
}
public class EmployeeManagement {
  private static final String FILE_NAME = "employees.ser";
  public static void addEmployee() {
     try (ObjectOutputStream oos = new ObjectOutputStream(new
FileOutputStream(FILE_NAME, true))) {
       Scanner scanner = new Scanner(System.in);
       System.out.print("Enter Employee ID: ");
       int id = scanner.nextInt();
       scanner.nextLine();
       System.out.print("Enter Employee Name: ");
       String name = scanner.nextLine();
       System.out.print("Enter Designation: ");
       String designation = scanner.nextLine();
       System.out.print("Enter Salary: ");
       double salary = scanner.nextDouble();
       Employee employee = new Employee(id, name, designation, salary);
       oos.writeObject(employee);
       System.out.println("Employee added successfully.");
     } catch (IOException e) {
       System.err.println("Error: Unable to add employee.");
```

```
}
  public static void displayEmployees() {
     try (ObjectInputStream ois = new ObjectInputStream(new
FileInputStream(FILE_NAME))) {
       while (true) {
         try {
            Employee employee = (Employee) ois.readObject();
            System.out.println(employee);
          } catch (EOFException e) {
            break;
     } catch (FileNotFoundException e) {
       System.err.println("Error: No employee records found.");
     } catch (IOException | ClassNotFoundException e) {
       System.err.println("Error: Unable to display employees.");
  }
  public static void main(String[] args) {
    Scanner scanner = new Scanner(System.in);
     while (true) {
       System.out.println("\nEmployee Management System");
       System.out.println("1. Add an Employee");
       System.out.println("2. Display All Employees");
       System.out.println("3. Exit");
       System.out.print("Enter your choice: ");
       int choice = scanner.nextInt();
       switch (choice) {
         case 1:
            addEmployee();
            break;
         case 2:
            displayEmployees();
            break;
         case 3:
            System.out.println("Exiting the application.");
            return;
         default:
            System.out.println("Invalid choice. Please try again.");
```

```
er. Learn. Empow
}
}
}
```

4. Output:

```
Employee Management System

1. Add an Employee

2. Display All Employees

3. Exit
Enter your choice: 1
Enter Employee ID: 101
Enter Employee Name: Prince Ranjan
Enter Designation: Manager
Enter Salary: 90000
Employee added successfully.

Employee Management System

1. Add an Employee

2. Display All Employees

3. Exit
Enter your choice:
```

5. Learning Outcomes:

- Learn about Serialization and Deserialization.
- Understanding File Handling in Java.
- Exceptional Handling in Java.
- Enhancing Problem-Solving Skills
